DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-2, 4-17 and 20-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Sanders (2002/0006186).

Consider claims 1, 16 and 31, Sanders teaches a method, apparatus and computer program medium for generating a test script associated with a virtual telephone caller system used to test a contact center, the method comprising: receiving a test script having one or more test script portions (paragraph 0043 lines 1-10); and associating script parameters at a first time with at least one of the test script and at least one of the test script portions (paragraph 43 lines 11-15), wherein the script parameters are related to a behavior of the test script that allows the test script to provide two or more of a functional test, a load test, and a monitoring test (paragraph 0053).

Consider claims 2, 17 and 32, Sanders teaches wherein the functional test corresponds to a test of the contact center which can be run at a time corresponding to a time of formation of the contact center or to a time of adding new features to the contact center in order to test the general function of the contact center (paragraph 0053 lines 3-6).

Art Unit: 2614

Consider claims 5 and 20, Sanders teaches wherein the first time corresponds to a time after the test script is generated (paragraph 0043).

Consider claims 6-7 and 21-22, paragraphs 0027-0042 read on at least one of the claimed features.

Consider claims 8-15 and 23-30, paragraph 0043 lines 13-15; paragraphs 0027-0042 read on the claimed features.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 3-4, 18-19 and 33-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sanders (2002/0006186) in view of Kuenzig (5,572,570).

Consider claims 3-4, 18-19 and 33-34, Sanders did not suggest wherein the load test and monitoring test corresponds to test of the contact center which can be run while the contact center is in operation. However, Kuenzig suggested such (see abstract). Therefore, it would have been obvious to one of the ordinary skill in the art at the time the invention was made to incorporate the teaching of Kuenzig into view of Sanders to ensure the quality and integrity of the system after being placed in service.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
